NICKNAME

OPERATIONS

14 Jan 1982 The first element of 622nd TCF personnel returned to Europe from Elf One in Saudi. Remaining personnel returned by 21 January 1982.

During January 1982, a major accomplishment was realized at the FACP level. Although controllers had previously provided back up to AWACS and SOC controllers, the FACP members had never been designated as primary controllers. Because of this back up role, the FACP had never been scheduled to control practice intercepts or refuelings. 2 January 1982, a request was approved to make the FACP at Al Jubayl, Saudi Arabia, a primary control agency and on 10 January 1982, members of the 622nd TCF controlled the Elf One FACP's first training mission as a primary control agency.

19 April 1982 The 622nd TCF accomplished a helilift to test the "minimum force" concept for wing FACPs. For the wing, this also happened to be the first operational air delivery of the TPS-43E radar system.

622nd Tactical Control Flight Unit was located at Rhein Grafenstein, Germany. Unit inactivated in 1991
